PROFESSIONAL EXPERIENCE

Data Engineer | Deloitte

Sep 2024 – Present • Porto, PT

- Contributing to the architecture design of a data platform project with future implementation in Databricks.
- Participated in a data migration project from a legacy Data Warehouse environment (COBOL-based systems) using Oracle Data Integrator (ODI).
- Developed and maintained ETL workflows and data pipelines in ODI to extract, transform and load large-scale enterprise data during the migration process.
- Used SQL Developer to analyze database tables, validate data structures, and support transformation logic design.
- Analyzed JCL scripts and COBOL code to define data mapping and migration requirements.
- Provided occasional support for production deployments and assisted Scrum Master activities when required.

Salesforce Developer | Natixis

Oct 2022 – Oct 2023 • Porto, PT

- Contributed to the architecture and development of an internal Salesforce solution for user access and license optimization.
- Developed custom backend business logic using Apex to analyze user permissions, object access, and feature utilization across the Salesforce environment.
- Built user interfaces using Lightning Web Components (LWC) to present access and usage insights.

Low Code Developer | Natixis

Apr 2022 – Jul 2022 • Porto, PT

- Designed and deployed an Innovation Management Platform leveraging Microsoft Power Platform (Power Apps, Power Automate, SharePoint) enabling employees to submit, track, and manage innovation ideas with automated approval workflows.
- Developed interactive Power BI dashboards monitoring idea pipelines, participation rates and innovation metrics. Platform is currently active and used across the organization

EDUCATION

Bachelor's Degree in Systems Engineering

Instituto Superior de Engenharia do Porto (ISEP) • 2019 – 2022

FEATURED PROJECTS

Event Management [Go, SQLite, Gin, JWT]

- Event Management REST API using Go, enabling users to create and manage events through secure API endpoints.
- Implemented JWT-based authentication to ensure only authenticated users could create, update, and delete their events.
- Integrated SQLite as the persistence layer for storing user and event data.

Currency Exchange [Go, Huh?]

- Terminal User Interface (TUI) currency exchange application using the Huh? library.
- Integrated with external exchange rate APIs to retrieve and display real-time currency conversion data.

Personal Portfolio [HTML, CSS, JavaScript]

- Developed a responsive portfolio website to showcase projects, technical skills, and professional experience.

- Built using responsive web design principles, optimized across desktop, tablet, and mobile devices.

Flight Hub Application *[Java, Spring Boot]*

- Flight search web application using Spring Boot, integrating external aviation REST APIs to retrieve flight data.
- Implemented search functionality based on origin and destination airports, enabling users to get specific flight information.

Weather Application *[Go, React]*

- Full-stack weather application using Go for the backend REST API and React for the frontend interface.
- Built a REST API to fetch weather data for a given city from an external weather service.
- React-based frontend to allow users to search for cities and display the corresponding temperature.

TECHNICAL SKILLS

Programming Languages: Go, Java, SQL, JavaScript, HTML, Python

Frameworks & Tools: Spring Boot, Gin, React, Oracle Data Integrator (ODI), SQL Developer

Cloud & Platforms: Databricks

Other: REST APIs, ETL/Data Pipelines, Data Warehousing, Power Platform, Power BI, Salesforce (Apex, LWC), Git, Agile/Scrum

LANGUAGES & SOFT SKILLS

Languages: Portuguese (Native), English (Intermediate)

Soft Skills: Communication and Technical Presentation, Problem-Solving, Team Collaboration (Agile/Scrum)
